Sewage Treatment Plants and Septic Tanks

Aquasource are specialists in the design and install of Sewage Treatment plants and Septic Tanks for Domestic and Commercial Customers throughout Devon and Cornwall.

We also supply and install grease traps and pumping stations if required.

We are authorised contractors for UKDP Drainage Insurance Claims Experts and are therefore able to help with your insurance claims for damaged septic tanks, sewage treatment works or drainage fields. For more details click here [Aquasource and UKDP](#)

Septic Tanks :- Replacement or Repair

A septic tank will cope with all your foul and grey water drainage if the Environment Agency will permit it. A percolation test is usually required to determine whether it

will be possible to use a septic tanks on a site.

Aquasource can arrange, undertake and interpret the results of percolation tests. We will also liaise with the Environment Agency to ensure compliance with all relevant environmental regulations.

Aquasource supply and install septic tanks and cesspools to solve the practical problems of storing and/or treating foul and grey water for homes and businesses. They are available in a variety of sizes to suit your application.

To find out more about Septic Tanks and Cesspools and how they can be applied to your project, talk to one of our experts.

Sewage Treatment Plants

When using a septic tanks is not feasible due to ground conditions on site a sewage treatment plant will solve you waste water treatment problem.

Aquasource supplies and installs a full range of Sewage treatment plants for Private and Commercial Applications.

We will handle all the necessary permits and deal with all required statutory authorities as a result the process will be as smooth and stress free as possible.

Our Sewage Treatment Plants are Certificated to European Standard EN-12566

A new European Performance Standard was introduced in 2005.

EN-12566 requires manufacturers to submit their product to a testing regime that accurately measures the performance of treatment plants up to 50 population.

These tests identify how much pollution the sewage treatment plant removes from the waste water, what level of maintenance is required, and what power is absorbed.

All sewage treatment plants we supply are approved for an exemption from a permit to discharge under the new EPP2 environmental legislation.

Of course private sewage treatment solutions dovetail very well with [private water supplies](#) and [rainwater harvesting](#).
