

**Mains Boost Install Completed**

A customer in West Cornwall had converted their barns for residential use and the incoming mains was inadequate to provide use-able water pressure for the occupants.

A new incoming mains supply would have been a very expensive option.

Aquasource (SW) Ltd solved the problem by installing a tank, Ultraviolet disinfection and a booster pump to provide water during peak demand periods.

The occupants can now take a shower without worrying about a loss of pressure!

If you are suffering from mains pressure problems we may be able to help.
