

Mini Piling at Porthmear

Aquasource SW Ltd has been piling at Porthmear Beach, St Ives for a new build house.

Not a bad little spot to work!

The contract called for a mix of 6" and 8" rock socketed 'ODEX' minipiles.

These will support the foundations of the new house.

The method of pile installation is suitable for small tight access sites such as this one and produces a minimum of mess and disruption on site.

For more details on our range of foundation and ground stabilisation services phone roger on 07980499619 or email roger@aquasourceltd.co.uk
