

Aquasource At Royal Cornwall: - Day One

The sun is shining so come and see us at stand 570 for all your water borehole, water filtration and Ground Source Heat requirements

Aquasource at the Royal Cornwall Show 2019

AQUASOURCE
(SW) LTD.

Aquasource at the Royal Cornwall Show

It's that time of year again. If you are at the [Royal Cornwall Show](#) please pop in and have chat on stand 570 near the main ring. We look forward to helping you with your water, private drainage or groundsource heat pump related questions.

In addition we will be showing off our new logo/branding and our shiny (for now) new drilling rig!

Pop in for a chat. We will put the kettle on.

Fantastic Testimonial From a Groundworks Customer

We received this today from a social housing customer.

“Just a note that I visited ***** Gardens again today and was further impressed by the work which the two Aquasource groundworks engineers continue to carry out. Extremely tidy – cannot fault their work and also the rate at which they have completed the trenching. Excellent.

Customers I spoke to are very impressed including Mrs ***** at no.** who has had extensive work carried out in her garden; looks remarkably tidy and top soil yet to be added which will be better than when started! Works up by the bungalow were complete – again extremely tidy and now working on the last trench. Very professional – please pass on my remarks.”

UK heat pump market is growing again

Good News for the environment!

Groundsource Drilling for Social Housing Project

Ground Source Heat Borehole Drilling in Cornwall

Aquasource (SW) Ltd t/a Groundsource SW have started work on a 12 hole Ground Source Heat Pump drilling project for a local Ground Source Heat Pump installer in South West Cornwall.

The site is in a Cul-de-Sac surrounded by dwellings and we are working hard to minimise mess and disruption to the tenants. All working areas are being sheeted down with plywood and separation membranes and all arising are being taken offsite.

The Ground Source holes are being drilled to a maximum depth of 103m and on completion will be fitted with Geothermal probes and backfilled using special thermally conductive grout.

When completed the tenants on the site will be able to take advantage of clean, cheap and easily controllable heat from the Cornish bedrock.

For more information please contact Roger Wedlake on 01726 824837 or email roger@groundsourcesw.co.uk

Drilling Ground Source Heat Pump Boreholes

Ground Source Drilling for Tight Spots

Aquasource (SW) Ltd t/a Ground Source South West has started a Ground Source Heat Pump project on the Lizard Peninsular.

The project involves drilling up to 120m deep boreholes in the very small front gardens of social properties on an estate.

The access is very tight and we were just able to squeeze our Beretta T46 into the space available.

Tidyness and site cleanliness is paramount with all dirty water being tankered off site and the ground covered in tarpaulins and plywood to protect it from the drilling operations.

The ground is a very hard granite type rock with clay bands.

If you have a site that needs drilling for Groundsource Heat Pumps, or a water borehole, please give us a ring on 01726 824837
