

Enabling Works for Civils and Building Projects

Removing Concrete Staircase

For a client involved in a sensitive project in St Austell's White River shopping complex we were tasked with removal of an existing staircase with minimum disruption to site users and the public.

Instead of traditional, noisy and dusty, concrete breakers we employed our hydraulic burster which exerts 80 tonnes of pressure into a predrilled hole, cracking and breaking the concrete into manageable sections.

Removing Concrete Staircase using Hydraulic Burster
