

Water Borehole Drilling and Installation Services in Devon and Cornwall

Water Borehole Drilling and Installation

With a water borehole you could save up to 80% of Water Costs with your own supply because you only pay for electricity and filtration if required.

With over 20 years of water borehole drilling experience with both commercial and domestic borehole supplies we are able to offer you advice regarding water Quality and Quantity. We have drilled water boreholes in all areas of Devon and Cornwall and because of this have access to an extensive database of information on borehole water quality and quantity.

This gives us an unparalleled position on advising our customers on their chance of a decent borehole supply.

Why Have a Water Borehole

Water charges, especially in the South West are ever on the increase.

Restrictions on supply can be arbitrarily applied in times of drought preventing people from watering their plants or stock or washing their cars or filling swimming pools etc.

A number of incidents affecting mains water quality have reduced peoples confidence in the water they are drinking.

Mains water contains chlorine and possibly fluorine and traces

of other chemicals needed to keep the water bug free on its journey from the water treatment works to your home.

The Solution

Whether you are miles from the mains, have an unreliable or contaminated shallow well, or are worried about hosepipe bans or contamination of the public supply, the answer is your own borehole...

Commercial Water Manifold installation in Cornwall

Enjoy natural untreated borehole water, with no added chemicals—indeed most bottled water brands come from boreholes.

Borehole water is fed under pressure to your taps.

Slash water costs by up to 80%—with no meter, all you pay for is the cost of electricity to your pump and for maintenance of your system.

Better yet, no licence is needed for private users abstracting less than 20 cubic metres of borehole a day—that's 20 tonnes of water! (In England and Wales)

We provide a complete one-stop solution including pump, controls, and UV filtration if needed—with the connections to your piped supply.

You need to be sure when you have a water borehole drilled, that it is properly constructed, and will serve you for a very long time.

Aquasource will always fit and top casing to prevent the ingress of potentially contaminated surface water.

All our boreholes are fully lined with slotted and plain casing. All casing materials meet the specifications of the WRAS (Water Regulation Advisory Scheme) .

We are always happy to come out on site and meet to discuss your requirements for a water borehole and we never charge for quotations.

More details to follow but for more information ring 01726 824837 and ask for Mark or Dave.
